## USING EZTV2Pulsar:

Add a New Show: Allow to find and add a new show to the list.

Remove a New Show: Allow to erase a show in the list.

View the List: It gives the list of show added.

Sync .strm Files: It check online the new episodes for the show added in the list.
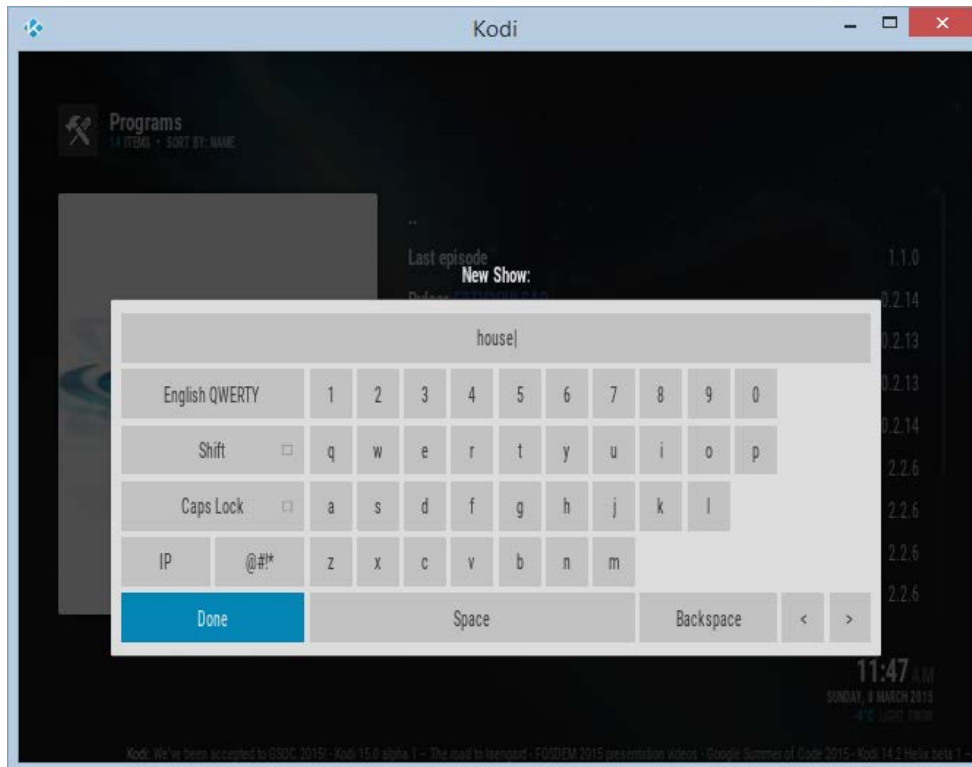

SETTINGS: To change the script settings.
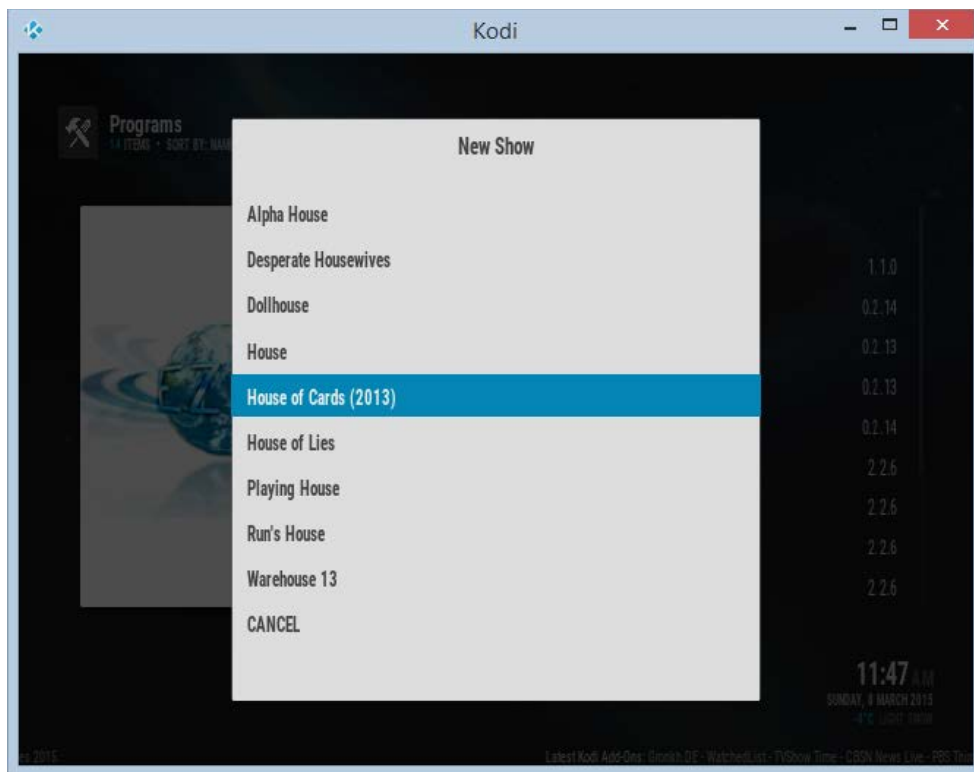

HELP: To find this guide.

Exit: To exit from the menu and the script.

ADDING A NEW SHOW

For example we want to add House of Cards. We select the option Add a new show.

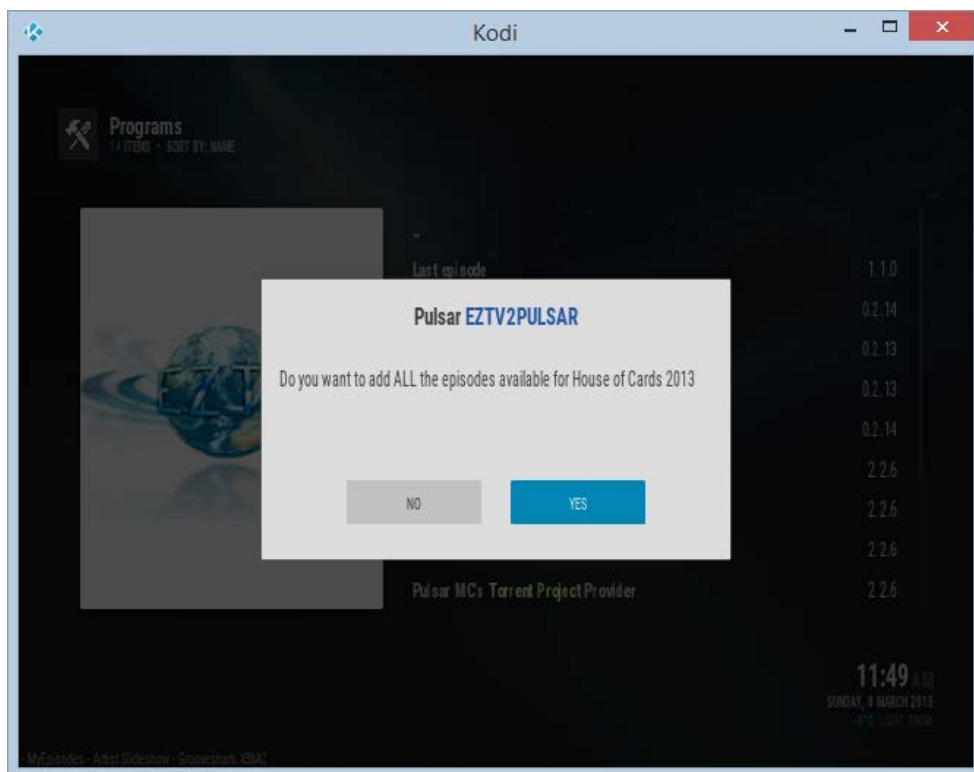

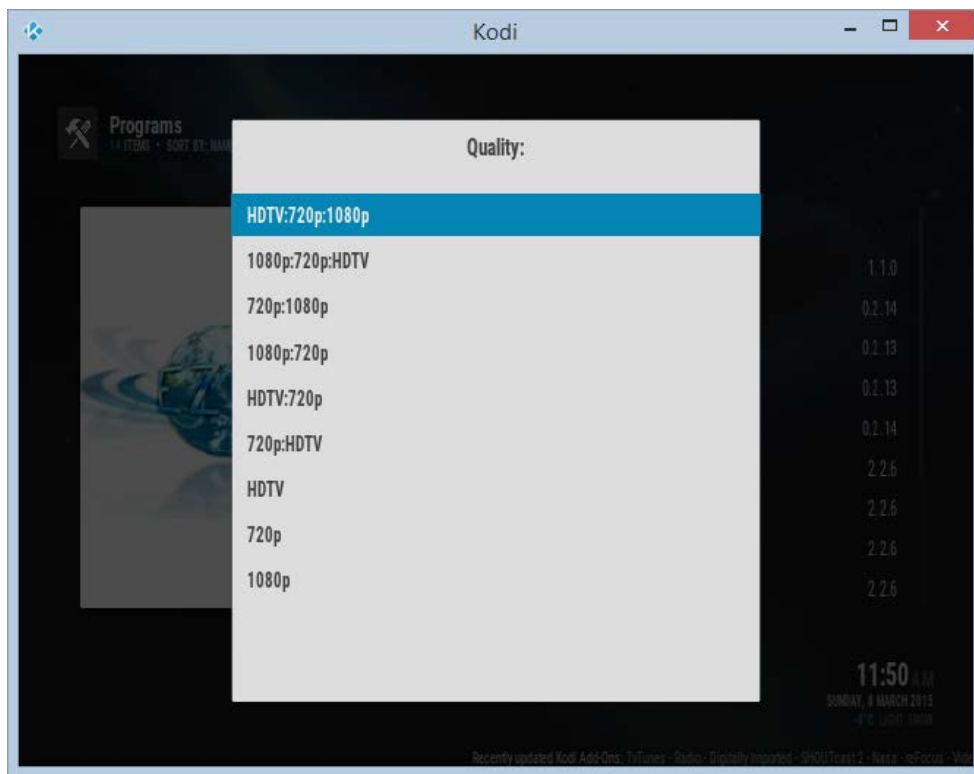

It is not necessary to write all the name. Just a keyword it is ok.

We select the show from the list of suggested shows
It is possible to cancel the operation selecting the option CANCEL.

We select the quality:

HDTV:720p:1080p: If the option of overwritten is off. It will search for HDTV first. If it doesn't find any, it will check for 720p, etc.

1080p:720p:HDTV: If the option of overwritten is off. It will search for 1080p first. If it doesn't find any, it will check for 720p, etc.

*720p:1080p*: If the option of overwritten is off. It will search for 720p first. If it doesn't find any, it will check for 1080p.

1080p:720p: If the option of overwritten is off. It will search for 1080p first. If it doesn't find any, it will check for 720p, etc.
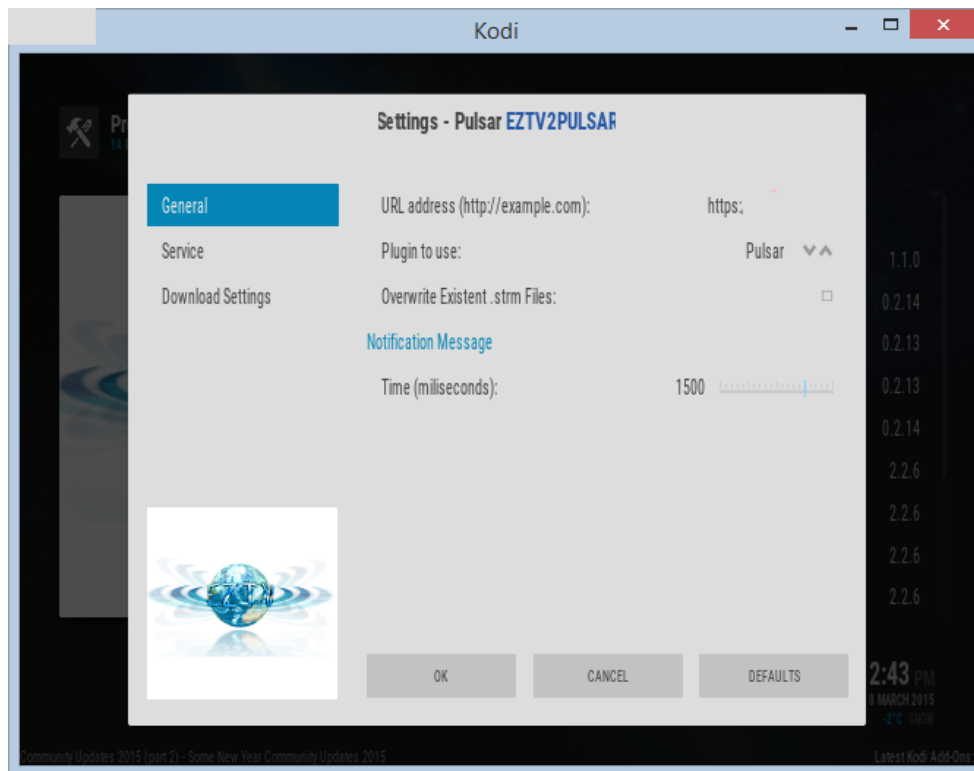

HDTV: It only search for HDTV episodes.

720p: It only search for 720p episodes.

1080p: It only search for 1080p episodes.

SETTINGS

General

*URL address*: The eztv url address.

Plugin to use: Select between Pulsar, KmediaTorrent and xbmctorrent to play the files.

Overwrite files: By default, the script doesn't overwrite files. But, if you need to do it. You need to enable this option.

Notification message time: It will config the time of the notifications. If you select zero, it won't have any notification.

Service

If you want to run automatic the script in the start of Kodi, you need to enable this option.

Run as Service: To enable the script to run at the start of Kodi. If you suspend your system, it won't run the next time. It only works when the system starts, no resuming from suspended.

Persistent Update: To run the script every 8h. If you have your system suspended, it will run the next that you turn on and it will resume every 8h.

Quality: Define which quality search (same criteria already explained).

Download Settings

Number Pages: The site gives several pages of results. You can set-up how many pages you want that the script uses.

Show Folder: It will be the folder where you need to save the .strm files. That folder needs to be added as TV Show source in other to be update in the local library. Please, check this link: Adding video sources
